

How to Split Friends Efficiently?

Andor Vári-Kakas
Excellence Scholar
Computer Science MSc

Challenge: can you split the students below into 3 groups such that friends are separated?

Paper title: Finding Colorings in One-Sided Expanders

- ▶ Efficient algorithm via spectral techniques
- ▶ The friendship network must be “nice”: expanding and balanced
- ▶ Deciding if 3 groups suffice is easier than deciding if 4 do
- ▶ Applications in timetable design, telecommunication networks, sports events
